

**FACT: One out of every 4 children attending school has been exposed to a traumatic event that can affect learning and/or behavior.**

**FACT: Trauma can impact school performance.**

- Lower GPA
- Higher rate of school absences
- Increased drop-out
- More suspensions and expulsions
- Decreased reading ability

**FACT: Trauma can impair learning.**

Single exposure to traumatic events may cause jumpiness, intrusive thoughts, interrupted sleep and nightmares, anger and moodiness, and/or social withdrawal—any of which can interfere with concentration and memory.

Chronic exposure to traumatic events, especially during a child’s early years, can:

- Adversely affect attention, memory, and cognition
- Reduce a child’s ability to focus, organize, and process information
- Interfere with effective problem solving and/or planning
- Result in overwhelming feelings of frustration and anxiety

**FACT: Traumatized children may experience physical and emotional distress.**

- Physical symptoms like headaches and stomachaches
- Poor control of emotions
- Inconsistent academic performance
- Unpredictable and/or impulsive behavior
- Over or under-reacting to bells, physical contact, doors slamming, sirens, lighting, sudden movements
- Intense reactions to reminders of their traumatic event:
  - Thinking others are violating their personal space, i.e., “What are you looking at?”
  - Blowing up when being corrected or told what to do by an authority figure
  - Fighting when criticized or teased by others
  - Resisting transition and/or change

**FACT: You can help a child who has been traumatized.**

- Follow your school’s reporting procedures if you suspect abuse
- Work with the child’s caregiver(s) to share and address school problems
- Refer to community resources when a child shows signs of being unable to cope with traumatic stress
- Share Trauma Facts for Educators with other teachers and school personnel
